NEED A NEW WEB SITE?

DO IT YOURSELF & SAVE A FORTUNE

TRAINING OBJECTIVES:

- *List the 10 steps in building a web site from scratch from domain name registration through to search engine optimisation.*
- *Explain how to buy reliable web hosting and detail the sorts of features you should be looking for in a hosting account.*
- *Explain the purpose and advantages of using an open source content management system. Learn how to create new web pages using it.*
- *Install the content management system on your new web site as well as finding, selecting and installing a theme for your site.*
- *Perform basic on-site search engine optimisation on your web pages.*
- *Upload, resize, align and caption images on web pages. Create an image gallery by uploading images from your desktop.*

Keep in mind that it will be easier if you have your words and images ready to go so you can build your own web site

LEARN TO BUILD A QUALITY SITE IN ONE DAY

Any moderately talented office worker, student or business person will be capable of creating functional business quality web sites after attending this one day web site design training course. If you can use a computer, edit a text file and follow basic instructions, you can have a quality web site up and running in a matter of hours.

We will train you to use the world's most popular web site content management system. It is sad that so many people still outsource web design to excruciatingly costly web design companies. In most cases, expensive web site design software is quite unnecessary. All of the tools required, and especially the most productive tools, are freely available as free applications.

Guarantee: At the end of this one day training course you will have a web site that you can edit and optimise yourself
